

## Comparative Analysis

**Site 1:** <https://connectmentors.com/>

Analysis → This site connects users to mentors from a company who will help them out through their journey. This site provides a really good user experience because everything is laid out neatly and easily accessible. The site follows many design patterns of websites that are similar to this one and has a navigation bar that encompasses all the important information.

**Site 2:** <https://www.learntobe.org/>

Analysis → This site has a very similar goal to what I am trying to create for my final project in which free educational resources are provided for kids from underserved and low income

communities. The site is very user friendly and provides a good user experience because everything is easily findable. The text is also large so the heading stands out and the images also convey empathy and fits the theme of the site.
